

Embedding Files in PDFs

The **~CommentEmbed** custom TimeSavers shortcut embeds the specified file in the PDF file, as a comment (supported with Acrobat/Reader 5 or higher).

Syntax:

```
alert ~CommentEmbed (file.ext) (title) (description) /CS (yyyymmdd)
k-filesize
```

/CS = color label (as defined in TS-colors.ini) + icon (0=Paperclip, 1=Attachment, 2=Tag, 3=Graph)

File size is specified in KB; if 0, "unknown" is displayed in Acrobat's attachment details.

Example:

```
alert ~CommentEmbed (attach/Industrial-Strength XML.pps) (PowerPoint
slide show) (XML Overview Slideshow) /B0 (20050304) 119
```

The **~DocEmbed** custom TimeSavers shortcut embeds the specified file in the PDF file, as a document attachment (supported with Acrobat/Reader 6 or higher).

Syntax:

```
alert ~DocEmbed (file.ext) (description) (yyyymmdd) k-filesize
```

Example:

```
alert ~DocEmbed (attach/interview.jpg) (interview opening) (20041224)
36
```

During distilling, the default location for the text files is the Distiller folder; the shortcuts can be modified to refer to a different path with the **distillP** command. Icon type, location and color can also be adjusted.

The attachment can be opened or saved to disk by right-clicking the attachment icon; it is opened if double-clicked.

```
[WindowsToFrameFontAliases]
```

```
;  
; This section gives the Frame font name for a Windows font.  
; The format is Windows_Font=Frame_Font  
; Note this is the only place in maker.ini which refers to Windows fonts.  
; All other maker.ini font entries refer to the FrameFont.  
;  
; The format is (on a single line):  
;  
; A_WINDOWS_FONT_NAME,[Italic | Regular |*],[A_WEIGHT |*]=  
; A_FRAME_FONT_NAME, [ AN_ANGLE | * ], [ A_WEIGHT | * ],  
; [ A_VARIATION | * ]  
...
```
