

QuickTime VR Movie

“QuickTimeVR (QTVR) incorporates the traditional disciplines of photography and videography with computational technology to provide flat photos with added life and depth.

Several individual snapshots are stitched up using special computer tools to make a seamless joining of a panoramic picture.

Apple Computer made the breakthrough research in making the QuickTimeVR movie player, embedded using special plug-in's or players available for many operating system. Before viewing the virtual reality movie, you must use a QuickTimeVR capable browser.”
